

AVONE STEELS INDIA

Bright Bars, Brighter Vision

est.2004

About Us

Avone Steels India is a third generation steel family business, established in 2004.

Our manufacturing unit, Aditya Steels, produces precision round, square, and hex bright bars across 90+ sizes using in-house shot blasting, drawing, straightening, and cutting facilities.

With consistent quality, transparent communication, and direct mill sourcing, we deliver reliable bright bar solutions for domestic and export customers.

Our Mission

To become a dependable global supplier of bright bars by combining precision processing and more than two decades of industry experience while maintaining competitive pricing, timely delivery and complete traceability of every shipment.

What we do

- **Shot Blasting**
- **Pointing**
- **Cold drawing**
- **Straightening**
- **Cutting and Bundling**

1) Shot blasting - We perform abrasive shot blasting on raw material to remove rust, oxide scale and surface contaminants.

This ensures a clean, defect-free surface enabling smooth drawing and giving a superior bright bars finish later.

2) Pointing - Before drawing, bars are pointed to reduce diameter at the head. This helps the bar pass through drawing dies avoiding breakage and ensures continues feeding during drawing.

3) Cold drawing - Bars are drawn through precision carbide dies to achieve -

- **Close dimensional tolerance**
- **Increased tensile strength**
- **Superior surface finish**
- **Better machinability**

4) Straightening - We ensure controlled straightness using dual pass straightening: First pass removes curvature after drawing. Second pass ensures excellent linearity and bending tolerance, suitable for CNC machining and high speed feed systems.

5) Cutting and Bundling - Bars are cut to required lengths and bundled properly. Each bundle carries:

- **Buyer's name**
- **Size**
- **Grade**
- **Length**
- **Remarks**

Our Products

We manufacture and supply a wide range of precision bright bars in rounds, hexagons and squares using high quality raw materials and strict dimensional control. With 90+ sizes and consistent

mechanical properties, we cater to traders, stockists, machinists, fabricators and component manufacturers across multiple industries.

Our products are known for tight tolerances, smooth surface finish, straightness and uniformity making them ideal for machining and engineering applications.

Grades we offer

- **MS Bright Bars** - Low carbon steel with good weldability and machinability. Applications include general fabrication, light engineering parts, brackets, studs, shafts.
- **EN8D Bright Bars** - Medium carbon steel with excellent strength and wear resistance. Applications include shafts, axles, gears, pins, automotive parts.
- **20MnCr5** - Low carbon alloy steel with high case hardening capability. Applications include gears, transmission parts, camshafts.
- **EN19 (4140 equivalent)** - High strength alloy steel with superior toughness and fatigue resistance. Applications include high stress shafts, heavy duty components, tool parts.
- **SAE 8620** - Case hardening alloy steel with excellent core strength. Applications include automotive components, crankshafts, gear blanks.
- **EN1A (S)** - A sulphur added free cutting steel known for high machinability and smooth turning performance. Applications include general machining, fasteners, bushes, studs, spacers, auto lathe parts.
- **EN1A (Pb)** - A lead enhanced free cutting steel offering the highest machinability and superior surface finish. Applications include precision CNC parts, screws, pins, inserts, fittings, high volume turned components.

Sizes we offer

Rounds	Squares	Hexagons
7.80	7.82	18.88
7.86	11.86	20.88
7.87	11.90	21.85
7.90	13.90	21.91
8.10	14.88	23.76
8.32	19.88	23.88
8.94	25.40	26.92
9.82		30.00

Industries Served

Our bright bars are regularly supplied to traders, machinists and component manufacturers serving a wide range of engineering and industrial applications, including:

- **Shaft and Axle Manufacturers**
- **Automotive component manufacturers**
- **Hydraulic and Pneumatic Equipment**
- **Gear and Transmission components**
- **CNC machining units**
- **General engineering and Fabrication**

Why Choose Us

- **Dedicated bright bar manufacturing unit:** Inhouse manufacturing at **Aditya Steels (est. 2014)** with controlled processes for consistent quality.
- **Consistent Machinability and Dimensional Accuracy:** Our bright bars are supplied to shaft and precision component manufacturers ensuring stable machining performance and straightness.
- **MTC and Heat number Traceability:** Material Test Certificates and Heat numbers provided for every supply ensuring transparency and accountability.
- **Third party Lab Testing:** Chemical and Mechanical test reports from ISO accredited independent laboratories on request.
- **Careful Raw material handling:** Raw materials stored on wooden sleepers instead of floor to prevent moisture absorption and surface contamination.
- **Export Ready Packaging:** Proper bundling, tagging and packaging suitable for containerised exports.

- **Flexible Trade Terms:** EXW, FOB and CIF options available depending on buyer's requirement.
- **Secure payment Terms:** LC at sight accepted for mutual safety and trust.
- **Export Ready:** Experience in bulk handling, container stuffing coordination and export documentation support.
